

PROTOTYPE FEEDBACK SHEET

Feedback on Prototype Round

Fill this in after the prototype arrives and send it to the workshop as it is. Separate faults from preferences, rank what matters, and record any material change.

Brand	Style name / code	Prototype round	Date

1 YOUR COMMENTS

A fault is something built wrong against the spec. A preference is built correctly, but seeing it changed your mind. Both are valid; label them, because they get handled differently.

#	Where	What you see	Fault / Pref.	Must / Nice
1				
2				
3				
4				
5				
6				
7				
8				
9				

Use your measurement codes where you have them, for example "B is 2 cm wider than the chart". Photograph and annotate anything easier to show than to describe.

2 MATERIAL CHANGES

A production quote is built on the materials used in the prototype it was based on. Change one, and the quote no longer describes what you are asking for.

Component	From	To	Quote reconfirmed

			☐

3 WHERE THIS LEAVES US

- ☐ Approved. Move to sampling. ☐ Build a second prototype with the changes above.

Send it written, every round. Decisions agreed on a call get remembered differently by everyone present. A short written list after each review is what stops a second prototype coming back built to the wrong understanding.

Want someone to run the rounds for you? Italian Artisan manages prototyping with Italian workshops, and turns your comments into technical corrections. italianartisan.com
